

Ice Shield™ Newsletter

Ice Shield now FAA approved on DHC-8 aircraft!

Ice Shield is pleased to announce it has FAA STC/PMA, along with Transport Canada and EASA validations, for the entire DHC-8 aircraft series. Many hours of engineering, certification and flight testing time have made this program possible. The -8 series represents the largest aircraft certified and the largest program launch from Ice Shield and we are ready to be your one-stop supplier for DHC-8 -100, -200, -300 and Q400 wing boots.

Faster

- 48 Hour Delivery Guaranteed within the Continental US and to US-based Freight Forwarders
- Easy Access to technical support

Better

- Interchangeable with original equipment
- Reduced operational cost

Smarter

- Backed by no-hassle warranty

B/E Aerospace is proud of the Ice Shield product line and its reputation for on-time delivery of high-quality products that represent good value for the customer.

Ice Shield introduces new Hardware parts

Along with the DHC-8 wing boots, Ice Shield is now offering Brush Blocks and Pneumatic De-ice valves. B/E is currently certified on six brush block assemblies and two repair modules. The new FAA certified pneumatic de-ice valve products include: two inflate valves, one deflate valve, one pressure control valve, one pressure regulating valve, and one ejector flow control valve. All Ice Shield hardware products are backed with a three (3) year no-hassle warranty. Ice Shield is enthusiastic about breaking into this new realm of products and are persistently working to meet your every de-icing need. For more product information, pricing and eligibility please contact one of our Ice Shield Distributors.
